

# Scallop Processing Plants and Equipment

Our firm has sold over **20 complete turn-key scallop plants** both for processing on land and on board fishing vessels. We have exported our plants to most of the biggest producers in Europe and assisted our customers with installation and start-up of these plants. We have developed a **new round type eviscerator** for cleaning the scallop. The new machine is very different from the earlier flat bed eviscerator. The difference of this machine from the older flat bed type is that the **yield is about 10-15 % better** (increasing yield from 10-12% to 12-14%). The new eviscerator take less space than the traditional one. This new type is now patented.
